Subscriber ID:	ROE07191984
Subscriber Name:	Éowyn Rohan
Relationship:	Self
Subscriber DOB:	1984-07-19
Subscriber Address:	12 Golden Hall Road, Bozeman, MT 59715

## II. MEDICAL BIOGRAPHY & HISTORY

Éowyn Rohan is a 39-year-old female with a resilient and independent spirit, working as a ranch hand in the rugged landscape of Montana. She has a history of physical fortitude but has been experiencing a persistent, low-grade discomfort in her jaw, which she attributes to an old, untreated injury from her younger years as a competitive rider. Despite the discomfort, she is stoic and tends to understate her symptoms, describing the pain as a minor nuisance rather than a significant disability.

Her medical history is notable for well-managed primary hypertension and GERD. She is not a smoker and consumes alcohol only socially. She presented to her primary care physician, Dr. King, during a routine check-up, mentioning the jaw issue almost as an afterthought. This led to a referral to a general dentist, Dr. Wormtongue, whose examination and basic panoramic x-ray did not reveal any acute or severe pathology. The findings were limited to mild, age-appropriate degenerative changes and evidence of previous tooth loss.

Following this, she was referred to a prosthodontist, Dr. White, to discuss options for improving her bite and addressing her subjective discomfort. The consultation focused on enhancing masticatory efficiency and the cosmetic appearance of her smile. The subsequent recommendation for a custom-fabricated oral prosthesis was made on these grounds, but the clinical documentation from her visits lacks a compelling argument for medical necessity. There are no records of failed conservative therapies (e.g., night guards, physical therapy), no advanced imaging detailing significant structural damage, and the patient's own reporting does not indicate that the condition severely impacts her daily activities or ability to maintain nutrition. The case file presents the requested procedure as more elective and restorative than medically urgent.

## III. CLINICAL REPORTS & IMAGING

### ■ PCP CONSULT NOTE

Report Text:

'''

**Facility:** Bozeman Health Deaconess Hospital

**Patient Name:** Éowyn Rohan

**DOB:** 1984-07-19

**MRN:** MRN-236

**Date of Service:** 2024-03-01

#### **SUBJECTIVE:**

Ms. Rohan presents to the clinic today for her annual wellness exam. She is a 39-year-old female who is generally in good health. She has no acute complaints today but does mention some chronic, intermittent left-sided jaw discomfort. She describes it as a dull ache, rated 2/10 at its worst, often noticed more in the mornings or after eating chewy foods. She denies any locking, clicking, or popping of the jaw. She cannot recall a specific injury but notes having had some facial trauma during a competitive sporting event many years ago, though it was

### ■ **DENTAL EXAM NOTE**

#### **Report Text:**

'''

**Facility:** Bozeman Dental Associates

**Patient Name:** Éowyn Rohan

**DOB:** 1984-07-19

**MRN:** MRN-236

**Date of Service:** 2024-03-15

#### **CHIEF COMPLAINT:**

Patient referred from PCP for evaluation of mild jaw discomfort and general dental check-up.

#### **HISTORY OF PRESENT ILLNESS:**

The patient is a pleasant 39-year-old female who reports a history of vague, intermittent left jaw pain. She denies significant functional impairment. The pain is minor and she is primarily here for a routine examination. She is interested in options to

### ■ **PANORAMIC XRAY REPORT**

#### **Report Text:**

'''

**Facility:** Bozeman Dental Associates

**Patient Name:** Éowyn Rohan

**DOB:** 1984-07-19

**MRN:** MRN-236

**Date of Service:** 2024-03-15

#### **EXAMINATION:**

Orthopantogram (Panoramic X-ray)

#### **REASON FOR EXAM:**

Evaluation of jaw pain and overall dental health.

**TECHNIQUE:**

A single digital panoramic radiograph of the mandible, maxilla, and associated structures was obtained.

**FINDINGS:**

- **Dentition:** Evidence of multiple missing teeth, specifically in the posterior quadrants (site of #14, #19, #30). No acute caries are visualized. Restorations appear intact.
- **Temporomandibular Joints:** The condylar heads appear symmetric and seated within the glenoid fossae. No significant erosive changes or gross abnormalities are noted. Joint spaces appear maintained.
- **Maxillary Sinuses:** Clear and well-aerated bilaterally.
- **Mandible and Maxilla:** The overall bone density appears within normal limits for age. There are some mild degenerative changes noted in the alveolar ridges, consistent with age and edentulous spaces. There is no evidence of acute fracture, dislocation, cysts, or aggressive osseous lesions.
- **Other Structures:** The nasal septum is midline. Styloid processes are of normal length.

**IMPRESSION:**

1. Multiple edentulous sites without acute pathology.
2. Mild, non-specific degenerative changes of the alveolar bone.
3. No radiographic evidence to explain significant temporomandibular joint dysfunction or acute pain. Findings are largely unremarkable.

**Electronically Signed by:**

Gríma Wormtongue, DDS

■ **PROSTHODONTIST CONSULT**

**Report Text:**

""

**Facility:** Orthanc Prosthodontics

**Patient Name:** Éowyn Rohan

**DOB:** 1984-07-19

**MRN:** MRN-236

**Date of Service:** 2024-04-10

**REASON FOR CONSULTATION:**

Evaluation for prosthetic options for malocclusion and improved masticatory function.

**HISTORY OF PRESENT ILLNESS:**

The patient is a 39-year-old female referred by Dr. Wormtongue for management of malocclusion and subjective jaw discomfort. The patient reports a long-standing feeling of her

## SUMMARY OF PATIENT HISTORY

This document provides a summary of the known medical and social history for Ms. Éowyn Rohan.

### ACTIVE MEDICAL PROBLEMS:

- \* Essential Hypertension: Diagnosed in 2021, currently managed with Lisinopril 10mg daily. Blood pressure readings are generally stable.
- \* Gastro-Esophageal Reflux Disease (GERD): Diagnosed in 2022. Managed with Omeprazole 20mg daily with good symptom control.
- \* Malocclusion: A long-standing condition. The patient has recently pursued specialist consultation for this.
- \* History of Facial Injury: Patient reports a remote history of facial trauma from a sporting accident over a decade ago. No specific records of the event are available, and the patient did not seek formal treatment at the time.

### PAST SURGICAL HISTORY:

- \* None reported.

### MEDICATIONS:

- \* Lisinopril 10mg daily
- \* Omeprazole 20mg daily
- \* Aspirin 81mg daily
- \* Vitamin D3 1000 IU daily
- \* Ibuprofen 200mg as needed for mild pain
- \* Multivitamin daily
- \* Cetirizine 10mg daily for seasonal allergies

### ALLERGIES:

- \* No Known Drug Allergies.

### SOCIAL HISTORY:

- \* Ms. Rohan is single and lives alone in Bozeman, MT. She is employed as a ranch hand.
- \* She denies current tobacco use.
- \* She reports social alcohol use, approximately 2-3 glasses of wine per week.
- \* She is physically active through her work and personal hobbies.

### FAMILY HISTORY:

- \* Mother: Deceased, cause unknown.
- \* Father: Deceased, cause unknown.
- \* Brother: Alive and well.
- \* No known family history of cardiovascular disease, diabetes, or cancer.

### RECENT CLINICAL EVENTS:

The patient has been evaluated by her primary care physician (Dr. King), a general dentist (Dr. Wormtongue), and a prosthodontist (Dr. White) over the past two months for complaints of mild ja...
