Deductible:	\$2500
SUBSCRIBER	
Subscriber ID:	MBR-JP-987654
Subscriber Name:	Jesse Pinkman
Relationship:	Self
Subscriber DOB:	1984-09-24
Subscriber Address:	9809 Margo St, Albuquerque, NM 87104

II. MEDICAL BIOGRAPHY & HISTORY

Jesse Pinkman is a 40-year-old male with a complicated past, now seeking to establish a new chapter in his life. He is a skilled craftsman, specializing in woodworking. He lives alone and is financially independent through his craft.

Medically, Jesse has a history of generalized anxiety disorder, which is managed with a daily SSRI. He also has a significant history of polysubstance abuse, including methamphetamine and heroin, dating back to his early 20s. He reports being sober for many years and is no longer in active treatment or recovery programs, though he remains vigilant. He denies any current use of tobacco, alcohol, or illicit substances. His social and medical history have been tumultuous, leading to a desire to change aspects of his life he feels are holding him back, including his physical appearance.

He presents today requesting a Bilateral Sagittal Split Osteotomy (BSSO). His primary motivation is cosmetic. He is deeply unsatisfied with his 'weak' jawline and believes surgical enhancement will significantly boost his self-esteem and help him move on from his past identity. He does not report any functional deficits such as pain, difficulty chewing, or sleep-disordered breathing that would typically serve as primary indicators for this type of major surgery. His request is framed entirely around aesthetic improvement.

III. CLINICAL REPORTS & IMAGING

■ INITIAL ORAL SURGERY CONSULT

Report Text:

Patient: Jesse Pinkman (MRN: 232)

DOB: 1984-09-24

Date of Service: 2025-05-15

CHIEF COMPLAINT: "I want to get my jaw fixed. I don't like the way my chin looks, you know? It's weak. I want it, like, stronger. Bitches love a strong jawline."

HISTORY OF PRESENT ILLNESS: Mr. Jesse Pinkman is a 40-year-old male who presents for consultation regarding surgical correction of his jaw. The patient expresses significant cosmetic dissatisfaction with his facial profile, specifically a retruded chin and mandible. He states he has been unhappy with his appearance for most of his adult life and feels it negatively impacts his self-confidence. He is seeking a "fresh start" in life and believes improving his facial aesthetics is a key part of this process. He denies any significant functional issues such as difficulty chewing, swallowing, or speaking. He denies any history of temporomandibular joint (TMJ) pain, clicking, or locking. He reports no issues with sleep apnea or other breathing-related sleep disorders.

PAST MEDICAL HISTORY: Generalized anxiety disorder, History of polysubstance abuse (opioids, methamphetamines) with patient-reported long-term sobriety. No history of hypertension, diabetes, or heart disease.

PAST SURGICAL HISTORY: Wisdom tooth extraction (~2015).

MEDICATIONS: Sertraline 50mg daily. Takes Ibuprofen as needed for occasional headaches.

ALLERGIES: No Known Drug Allergies.

SOCIAL HISTORY: Single. Lives alone in Albuquerque. Denies current tobacco, alcohol, or illicit drug use. Works as a self-employed wood craftsman.

REVIEW OF SYSTEMS: As per HPI. Otherwise negative.

OBJECTIVE:

General: Patient is well-appearing, alert and oriented x4. Appears anxious but cooperative.

Vitals: BP 122/78, HR 82, RR 18, Temp 98.6 F.

Extraoral Exam: Mild facial asymmetry. Examination reveals a convex facial profile with a retrusive mandible and chin (mandibular retrognathia). Interlabial gap is within normal limits at rest. No palpable tenderness of the muscles of mastication.

■ BASIC METABOLIC PANEL

Report Text:

Patient: Jesse Pinkman (MRN: 232)

DOB: 1984-09-24

Date Collected: 2025-05-10 09:00

Date Reported: 2025-05-10 11:00

Ordering Provider: Dr. Anita Sharma, MD

Lab Report: Basic Metabolic Panel (BMP)

TEST | RESULT | REFERENCE RANGE | UNITS

|-----|-----|-----

SODIUM | 140 | 136-145 | mmol/L

POTASSIUM | 4.1 | 3.5-5.1 | mmol/L

CHLORIDE | 102 | 98-107 | mmol/L

CARBON DIOXIDE | 25 | 21-32 | mmol/L

GLUCOSE | 92 | 70-100 | mg/dL
BUN | 15 | 7-20 | mg/dL
CREATININE | 0.9 | 0.7-1.3 | mg/dL
CALCIUM | 9.5 | 8.5-10.2 | mg/dL

IMPRESSION: All values are within normal limits.

Electronically Signed,
ABQ Diagnostic Labs

■ CBC LAB REPORT

Report Text:

Patient: Jesse Pinkman (MRN: 232)

DOB: 1984-09-24

Date Collected: 2025-05-10 09:00

Date Reported: 2025-05-10 11:05

Ordering Provider: Dr. Anita Sharma, MD

Lab Report: Complete Blood Count (CBC) with Differential

TEST | RESULT | REFERENCE RANGE | UNITS

|-----|-----|-----|

WHITE BLOOD CELL COUNT | 6.5 | 4.5-11.0 | x10E3/uL

RED BLOOD CELL COUNT | 5.1 | 4.5-5.9 | x10E6/uL

HEMOGLOBIN | 15.1 | 13.5-17.5 | g/dL

HEMATOCRIT | 45.3 | 41-53 | %

MCV | 89 | 80-100 | fL

MCH | 29.6 | 27-33 | pg

MCHC | 33.3 | 32-36 | g/dL

RDW | 12.5 | 11.5-14.5 | %

PLATELET COUNT | 250 | 150-450 | x10E3/uL

DIFFERENTIAL:

NEUTROPHILS | 60 | 40-70 | %

LYMPHOCYTES | 30 | 20-45 | %

MONOCYTES | 6 | 2-10 | %

EOSINOPHILS | 3 | 0-5 | %

BASOPHILS | 1 | 0-1 | %

IMPRESSION: Normal CBC and differential.

Electronically Signed,
ABQ Diagnostic Labs

■ DENTAL XRAY REPORT

Report Text:

Patient: Jesse Pinkman (MRN: 232)

DOB: 1984-09-24

Date of Service: 2025-05-05

Exam: Panoramic Dental Radiography

TECHNIQUE: A standard panoramic radiograph of the mandible, maxilla, and associated structures was obtained.

FINDINGS:

DENTITION: Multiple restorations are present. No obvious carious lesions are identified radiographically. Third molars (wisdom teeth) are surgically absent. All other teeth are present.

MAXILLA AND MANDIBLE: The cortical borders of the maxilla and mandible appear intact. Bone density appears grossly normal. The mandibular canals are visualized bilaterally and appear unremarkable. The temporomandibular joints are grossly visualized and show no obvious degenerative changes, although this modality is limited for TMJ evaluation.

SINUSES: The maxillary sinuses appear clear.

IMPRESSION:

1. No acute radiographic findings.
2. Dentition status as described above.
3. Grossly normal appearance of the mandible and maxilla.
4. Note: This examination is a survey film and is not a substitute for detailed cephalometric or tomographic (CT) imaging for the purposes of orthognathic surgery planning.

Electronically Signed,
Dr. Marie Schrader, RAD

■ GENERAL MEDICAL CLEARANCE NOTE**Report Text:**

Patient: Jesse Pinkman (MRN: 232)

DOB: 1984-09-24

Date of Evaluation: 2025-05-12

REASON FOR CONSULT: Pre-operative medical evaluation for planned Bilateral Sagittal Split Osteotomy (BSSO).

To Whom It May Concern:

I have evaluated Mr. Jesse Pinkman in my capacity as his Primary Care Physician. His medical history is notable for generalized anxiety and a remote history of polysubstance abuse, for which he reports long-term sobriety. His anxiety is stable on his current dose of Sertraline.

Physical examination today was unremarkable. Vital signs are stable and within normal limits. Cardiovascular and pulmonary exams are clear. Recent laboratory work (CBC and BMP dated 2025-05-10) was reviewed and showed no abnormalities.

From a general medical standpoint, Mr. Pinkman appears to be at a low risk for complications from anesthesia and surgery. He is medically cleared to proceed with his planned dental/surgical procedure.

Please do not hesitate to contact my office if you have any further questions.

Sincerely,

Dr. Anita Sharma, MD
Albuquerque General Hospital
